---

To the HR Department or recruiter at Vector,

Thank you for your consideration! My name is Hannah Robertson, and I would love to become a Back End Software Engineer with your organization. I graduated ASU with a Bachelor's of Science in Software Engineering in May of 2023, giving me skills that I believe will be a good fit for your position.

I believe that I would be a good fit for the your organization for several reasons. I've done several projects that require extensive back end work, especially to interface a website with Amazon RDS databases. As a result of this, I've also gotten quite good at SQL. I created several APIs using Amazon's API gateway and Lambda to interface with RDS.

I've worked with Python for several years, between work and school, and have extensive experience with specialized Python libraries like NumPy and Pandas, and some experience with pytest and FastAPI. I do have more extensive experience with using AWS Lambda in conjunction with API Gateway to interface with an SQL server on Amazon RDS. I also have adapted websites to use pre-existing REST APIs.

I have worked both solo and in a team during projects, and enjoy working with other software engineers to create the best solution for the client's problem. I have extensive experience with an agile sprint environment, as well as software related to agile development like Github and Jira.

I have done the majority of my professional work using HTML/CSS/Javascript in web design, but I also have used Typescript multiple times as it fits the needs of the client. My web development work has also been almost entirely adaptable to mobile with responsive formatting. I also have some experience in C# and other C suite languages, and extensive experience with Google Suite. I've also been using Microsoft Office for more than a decade, so I'm quite proficient.

Thank you for your time and consideration for this role. Based on my understanding of this role, I'm confident that my software expertise will help enhance your company's performance, similar to how I recreated my client's website and upped her company's traffic almost twice as much. I hope to discuss my background and relevant achievements further with you over an interview at your earliest convenience.

Thank you very much,

Hannah Robertson
