To the HR Department for Kingman Regional Medical Center,

Thank you for your consideration! My name is Hannah Robertson, and I would love to become an Office Assistant. I graduated ASU with a Bachelor's of Science in Software Engineering in May of 2023, giving me skills that I believe will be a good fit for your position.

I believe that I would be a good fit for your organization for several reasons. I did a brief stint as a Student Worker at ASU's Library. My job was to help organize and maintain the High Density Storage arm of the library. The High Density storage was a specialized, climate controlled archive where the library stored books that were out of date but kept for historical reasons. My job there involved placing and retrieving books according to a specialized size-based organizational system, as well as updating the book's location in the library-wide database. I also helped to sort books and select the best of multiple copies for archival.

Most of my customer experience is in the retail, food service, and education sectors, but between those two sectors I have over five years of experience. Most of my office customer service experience comes from my Student Worker job at ASU Technology office. I have answered phones, used a ServiceNow ticketing system, and used email to correspond with customers as necessary; I have advanced skills in PDF manipulation and word processing software.

I do have experience with handling cash and electronic transactions, both from my experience of PC Apps Intern with Pyramid Technologies and as a Cashier with Seligman General Store. As an intern, my money-handling duties mostly related to handling cash in order to test the hardware the company manufactured, while the General Store was a more traditional cashier position. At the General Store, I was also responsible for tallying up the cash left in my drawer each night and reconciling it with the transactions done that day.

I have highly advanced computer skills due to my degree in Software Engineering as well as several past jobs as a transcriptionist and tutor. These skills include database management, including with SQL if necessary, and advanced use of Microsoft Excel or Google Sheets (or similar programs). I can of course also use Microsoft Word or Google Docs as necessary. My typing speed is around 70 wpm due to a past transcription job, which could be useful as well.

I greatly appreciate your time to read this letter and review my application. I would love to work for Kingman Regional Medical Center, and hope to hear back from you soon.

Thank you very much,

Hannah Robertson
