To the HR Department or recruiter at Optum,

Thank you for your consideration! My name is Hannah Robertson, and I would love to become a Back End Software Engineer with your organization. I graduated ASU with a Bachelor's of Science in Software Engineering in May of 2023, giving me skills that I believe will be a good fit for your position.

I believe that I would be a good fit for the your organization for several reasons. I have worked both solo and in a team during projects, and enjoy working with other software engineers to create the best solution for the client's problem. I have extensive experience with an agile sprint environment, as well as software related to agile development like Github and Jira. Generally, my team met with our sponsor every two weeks for feedback and additional specifications.

I have done the majority of my professional work using HTML/CSS/Javascript in web design, but I also have used Typescript multiple times as it fits the needs of the client. My web development work has also been almost entirely adaptable to mobile with responsive formatting.

I do have some experience with test driven development using Unit Testing in Python and Java both, using the JUnit and PyTest libraries. I've also done test driven development with Javascript as well, especially in relation to back end development and API interface.

Thank you for your time and consideration for this role. Based on my understanding of this role, I'm confident that my software expertise will help enhance your company's performance, similar to how I recreated my client's website and upped her company's traffic almost twice as much. I hope to discuss my background and relevant achievements further with you over an interview at your earliest convenience.

Thank you very much,

Hannah Robertson
