Education

Arizona State University
Bachelor's of Science, Software Engineering, May 2023

Career Goal

I would love to work in web or app development, especially with JS/CSS/HTML, Java, or Python. I especially enjoy full stack development, and have a knack for integrating AWS into websites and wrangling legacy code.

Work Experience

Freelance Web Developer
August 2024- Current

- * Full stack web design, from basic graphic design to custom HTML/CSS/JS implementation to create fully unique websites.
- * Interfacing with AWS using AWS Lambda, API Gateway, and RDS to create a custom database editable only by admins.
- * Creation of coherent designs integrating material from a legacy site that had been poorly designed and implemented.
- * Advisory role in host services and setup of host services, as well as go between for owners of site and tech support.
- * Keeping track of hourly work and creation of invoices in order to bill clients in a timely manner.
- * Using Github to keep track of versioning, and Github Pages to preview site for my client.

PC Apps Summer Intern- Pyramid Technologies
May 2023- August 2023

- * Full stack web design using JS/CSS/HTML to create a custom web application to access information from a remote database.
- * Create custom login using Amazon Cognito to access an interface that enables admin-level users to modify the database within basic parameters.
- * Transferring a legacy Flask implementation to AWS backend and hosting, using Docker to simulate hosting environment.
- * Some C# to develop an application to control proprietary company firmware, and Appscript for compiling test results into Google Sheets.
- * Testing of company's proprietary bill acceptor hardware and software by manually feeding real and counterfeit bills through the acceptor.
- * Use Git and Github for version control, and Jira for ticket management

Capstone Project Developer- ASU Polytechnic University
August 2022- May 2023

- * This project was to create an interactive, educational website for our NASA sponsor about NASA's Psyche Mission to a remote asteroid.
- * Full stack web design, from basic graphic design to custom HTML/CSS/JS implementation to create fully unique websites.
- * Develop website using Agile Sprint workflow, working with a team of four other programmers in two week sprints.
- * Use Git and Github for version control, and Taiga for ticket management.

Skills

 Java
 Python
 Javascript
 CSS
 HTML
 C
 C++
 SQL
 Docker
 Git
 Github
 Jira
 Eclipse
 Visual Studio
 Amazon Web Services
